

## Berlin Textile Roofs 2024 – the saddle shape made on the seminar ship

The Textile Roofs workshop <https://www.tensinet.com/index.php/activities-networking/textile-roofs> or <https://www.textile-roofs.com/>, which took place on a seminar ship (on the Spree) from **28 to 30 April**, was an interesting informal meeting that combined expert talks with software hands-on, a prototype build and demonstrations.

Those passionate about the first Textile Roofs workshops could see how a younger generation is also dedicated and creatively active in the textile architecture sector.

A particularly valuable activity was the making of a canopy, which was mounted on the ship on the second day. Designed with Easy <https://www.technet-gmbh.com/produkte/easy/>, fabricated on deck by the staff of [www.Stoffdach-zelte.de](http://www.Stoffdach-zelte.de) and installed with the help of the participants!

You always learn by doing and discussing!
